REMARKS

This is UNEVALUATED
Information

25X1

1. In August 1955, repair work was done on 9 T-34 tanks with 76-mm guns, 12 T-34 tanks with 85-mm guns, 3 SU-76 guns, and 2 SU-100 guns.
2. In the September 1955 plan, the repair of 23 vehicles was scheduled.
3. It was planned for the first time that the Neubrandenburg plant had to repair several SP guns of type JSU-152. Repair was to be done on radar sets. These orders have now been cancelled by the Ministry of Interior since, according to the SSD, the workers of the plant were considered politically unreliable. In this connection, it was mentioned that Western leaflets have recently been distributed in the administrative building.
4. Difficulties in repair work resulted from lack of materials, delayed deliveries of motors from Wuzze, and an acute shortage of personnel.
5. Between 10 July and 7 October 1955, a training course for KVP armorer artificers was to be held at Neubrandenburg plant.

[REDACTED] Comment. The planned equipment of the KVP with JSU 152 SP guns is reported for the first time.
